

QUARTERLY REPORT

June 2009

Highlights

Exploration

- Auger soil sampling planned for the Yundamindera Project.
- Detailed review of the extensive previous drilling planned for the Hartwell Bore Project.
- The Company continues to assess other projects and opportunities.

Corporate

- Cash on hand \$2.856M as at 30 June 2009;
- Issued Capital: 30M ordinary shares.

ASX Code: ACZ

Peter McIntyre (Director) or Peter Ironside (Co Secretary)

Overview

Exploration

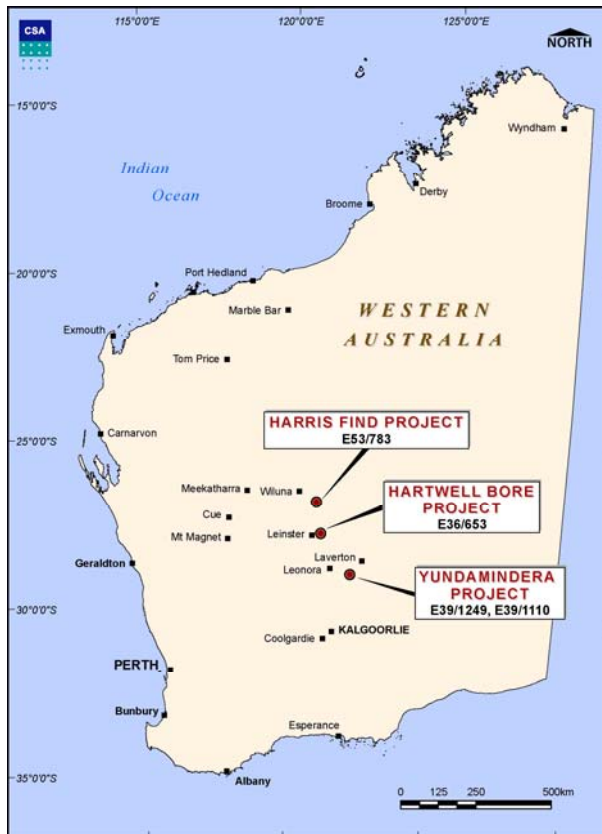

Figure 1 Project Locations

Yundamindera Project (Atticus earning 80%)

The Yundamindera gold project is located in the Eastern Goldfields Province of the Yilgarn Craton, 685 kilometres northeast of Perth and 205 kilometres north-northeast of Kalgoorlie. The project comprises two granted exploration licences, which are located adjacent to the historic mining centre of Yundamindera. Gold exploration carried out by a number of previous operators and Atticus has identified several areas of coherent gold anomalism (>50ppb Au & >100ppb Au) in near-surface soil sampling and RAB/aircore drilling that require follow-up work.

Previous exploration, including broad spaced RAB drilling, conducted in the northern parts of E39/1110, has identified at least two gold-in-regolith anomalies (>100ppb Au in RAB) that require further work. These areas have near surface regolith amenable to auger soil sampling and,

consequently, detailed 200x50m spaced sampling will be planned in the next quarter. Sampling will be completed subject to statutory approvals and contractor availability. Auger soil sampling will provide quick and cost effective screening of this prospective area.

Harris Find Project (Atticus 100%)

All final statutory technical reporting was completed for this project during the quarter. Final surrenders were completed in April.

Hartwell Bore Project (Atticus 100%)

The Hartwell Bore gold project is located in the northern parts of the Eastern Goldfields Province of

the Yilgarn Craton, 575 kilometres northeast of Perth and 32 kilometres east-northeast of Leinster. The single tenement, E36/653, covers an Archaean greenstone sequence at the western margin of the southern Yandal greenstone belt, however, most of the area is covered by more recent transported sediments and other regolith.

A detailed prospectivity review, completed during the previous quarter, highlighted two main gold prospects, both of which have been extensively tested with previous RAB drilling and to a lesser degree with RC drilling. This drilling has been inconclusive in identifying primary sources to the extensive gold-in-regolith anomalism (>0.1g/t Au & >1g/t Au). Further RC drilling may be warranted and more detailed prospect assessments are required to identify possible targets. These assessments are planned for the following quarter.

Corporate

During the quarter, the Company continued to seek opportunities for further acquisitions that meet its objectives. Atticus remains committed to completing an acquisition that could become the major undertaking of the Company.

Atticus Resources Limited

Chairman

Competent Person Statement

The information in this report that relates to Exploration Results is based on information compiled by Greg Jorgensen, a self-employed, Kalgoorlie-based Consulting Exploration Geologist, who is a Member of The Australian Institute of Geoscientists. Mr Jorgensen has sufficient experience, which is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2004 Edition of The JORC Code. Mr Jorgensen consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Further Disclosure

Mr Jorgensen is a Director of BrilliantGold Pty Ltd, an unlisted, Kalgoorlie-based mineral exploration company, which currently holds 100% of the Yundamindera Project. Atticus Resources Ltd is currently earning an 80% interest in this project.
